

# Omda Response

Comprehensive  
in-vehicle emergency  
response platform  
with powerful backend  
applications

---

## Why choose Omda Response

---

A comprehensive mobile solution for rescue vehicles and ambulances that includes a case handling and routing module for drivers and a patient record and medical support module for paramedics.

## Navigation

01

- A user-friendly mobile tool that assists emergency personnel in managing emergency workflows and gets the ambulance to the location of an incident as rapidly and safely as possible
- Preparation support
- Navigation
- Map support
- Communication with emergency service centres and other operational units
- Incident management tools

## Electronic medical record

02

- A modern and intuitive electronic medical record system that provides paramedics with up-to-date guidance on medical workflows and efficient documentation of medical care provided in ambulances
- Comprehensive workflow and documentation support
- Intuitive user interface with structured data input and dynamic checklists
- Knowledge base with guidance on treatment, triage, and medicines
- Messaging function for communication with healthcare professionals
- Integration with medical systems and ECG monitors
- Destination support
- Hospital handover workflow

## Response management

03

- A mobile solution that supports incident commanders to handle critical and complex situations
- Follows conceptual guidelines for incident management
- Role-based functionality
- Efficient information sharing
- Map support for visualizing incident locations and resources
- Situational awareness
- Structured reporting
