

Omda Medialab

Versatile and secure
image management
solutions

Why choose Omda Medialab

Whether still or moving image, Omda Medialab captures and stores efficiently and securely. In addition to secure storage and retrieval the system offers diagnostic tools to support clinical analysis.

Modality integration

01

- Capture and store images from different sources using a unified system
- Storage of images of all formats, including current standard formats and older legacy formats
- Easy access and retrieval of patient images regardless of the modality or format used

Web based multimedia management

02

- Web-based imaging solution for complete multimedia management
- Supports a broad range of medical disciplines, devices, and types of media
- Scalable solution suitable for single-use installations or hospital-wide deployments
- Configurable workflows
- Vendor-neutral and flexible software compatible with various media sources and hospital information systems

Storing, managing & sharing images

03

- Real-time capture, storage, and archiving of images, scans, videos, and notes
- Supports the complete workflow from order creation to distributed viewing
- Seamless integration with hospital imaging equipment, clinical systems and electronic patient records

Diagnostic tools

04

- Reviewing and interpreting images
- Tools for image improvements
- On screen measurements and comparisons
- Annotation of data with observations and notes
